

GP-REC

GP Renewables & Trading would like to offer you the opportunity to take advantage of the wholesale Renewable Energy Credits (RECs) and Solar Renewable Energy Credits (SRECs) markets and enhance the return on your Solar PV system through *GP-REC*.

GP Renewables & Trading is a multifaceted energy services company providing consulting, project development, and risk management services to clients in the North American electricity industry. With backgrounds from premier energy and environmental trading firms, the *GP Renewables & Trading* team has managed portfolios of electricity generation from coast to coast totaling upwards of 2000 MW's of generation capacity.

Details

As you may already know, your Solar PV system can qualify to satisfy a portion several state Renewable Portfolio Standards (RPS) requirements. Generally, an RPS requires any entity selling electricity to purchase an increasing quantity of RECs or SRECs each year. To date, 29 states have adopted a formal RPS with the goal of bettering the environment.

Using *GP-REC's* help, your system can be registered with the state as a Renewable Resource. Once registered, all you need to do is make sure your system is operational and every 1000 kilowatt-hours of electricity your system generates per year will also generate 1 REC or 1 SREC.

Example

If you own a 10 KW Solar PV system, you could be generating approximately 10 RECs per year. If those RECs were assigned to a full service, wholesale market participant like *GP Renewables & Trading* through *GP-REC*, you could start receiving **annual payments** for this production in addition to the savings you are already realizing on your home electric bill.

As active market participants, *GP Renewables & Trading* can help you sell your RECs and SRECs for upwards of \$650.00 per SREC for a New Jersey sited system, for instance. In other words, you can receive annual payments totaling more than **\$6500** just for using *GP-REC*.

What Now?

GP Renewables & Trading is offering you limited access to the wholesale markets. Every kilowatt of electricity that your Solar PV system produces without being sold will expire worthless. The only way to take advantage of this opportunity to maximize your investment in going green is to sign up with *GP-REC* now at www.gprenew.com.
